

Automated Production of Political Indicators

Matthew C. Dickenson
mcd31@duke.edu

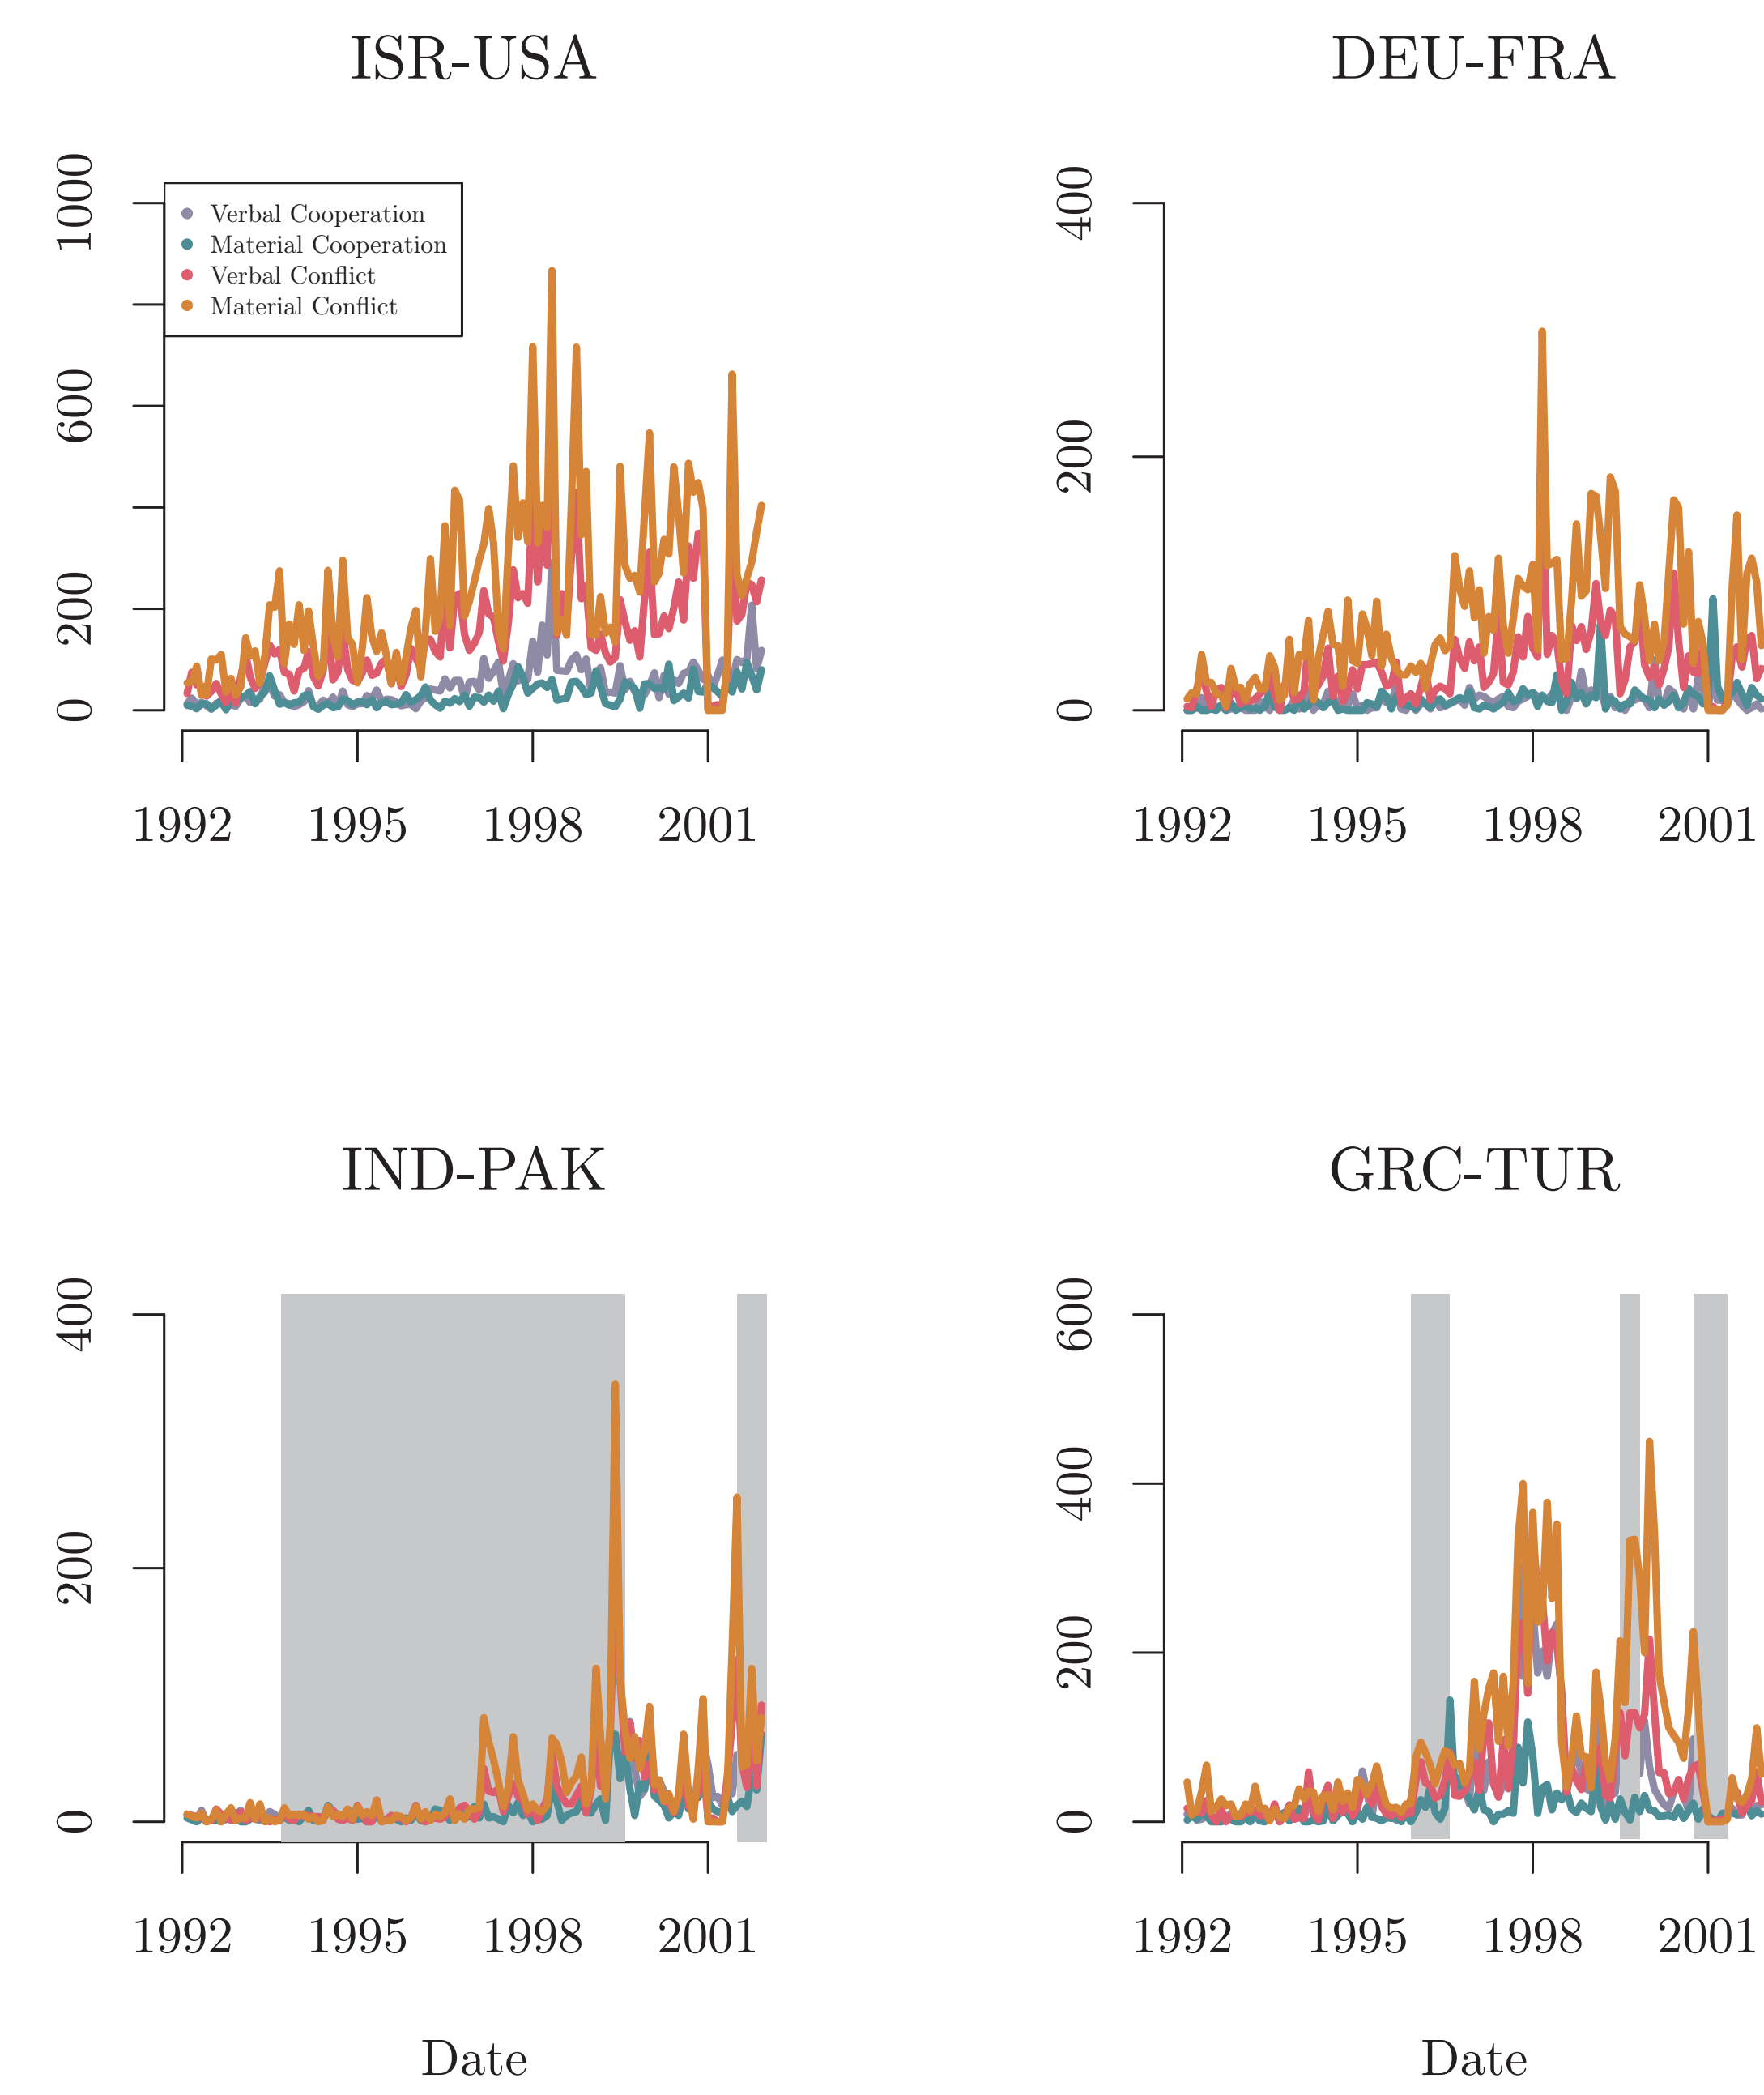

Motivation

Can political indicators such as the Militarized Interstate Dispute (MID) dataset be aided by automated classification procedures? Existing pipelines for production of MID and related datasets (e.g. Polity and Freedom House) are costly and slow.

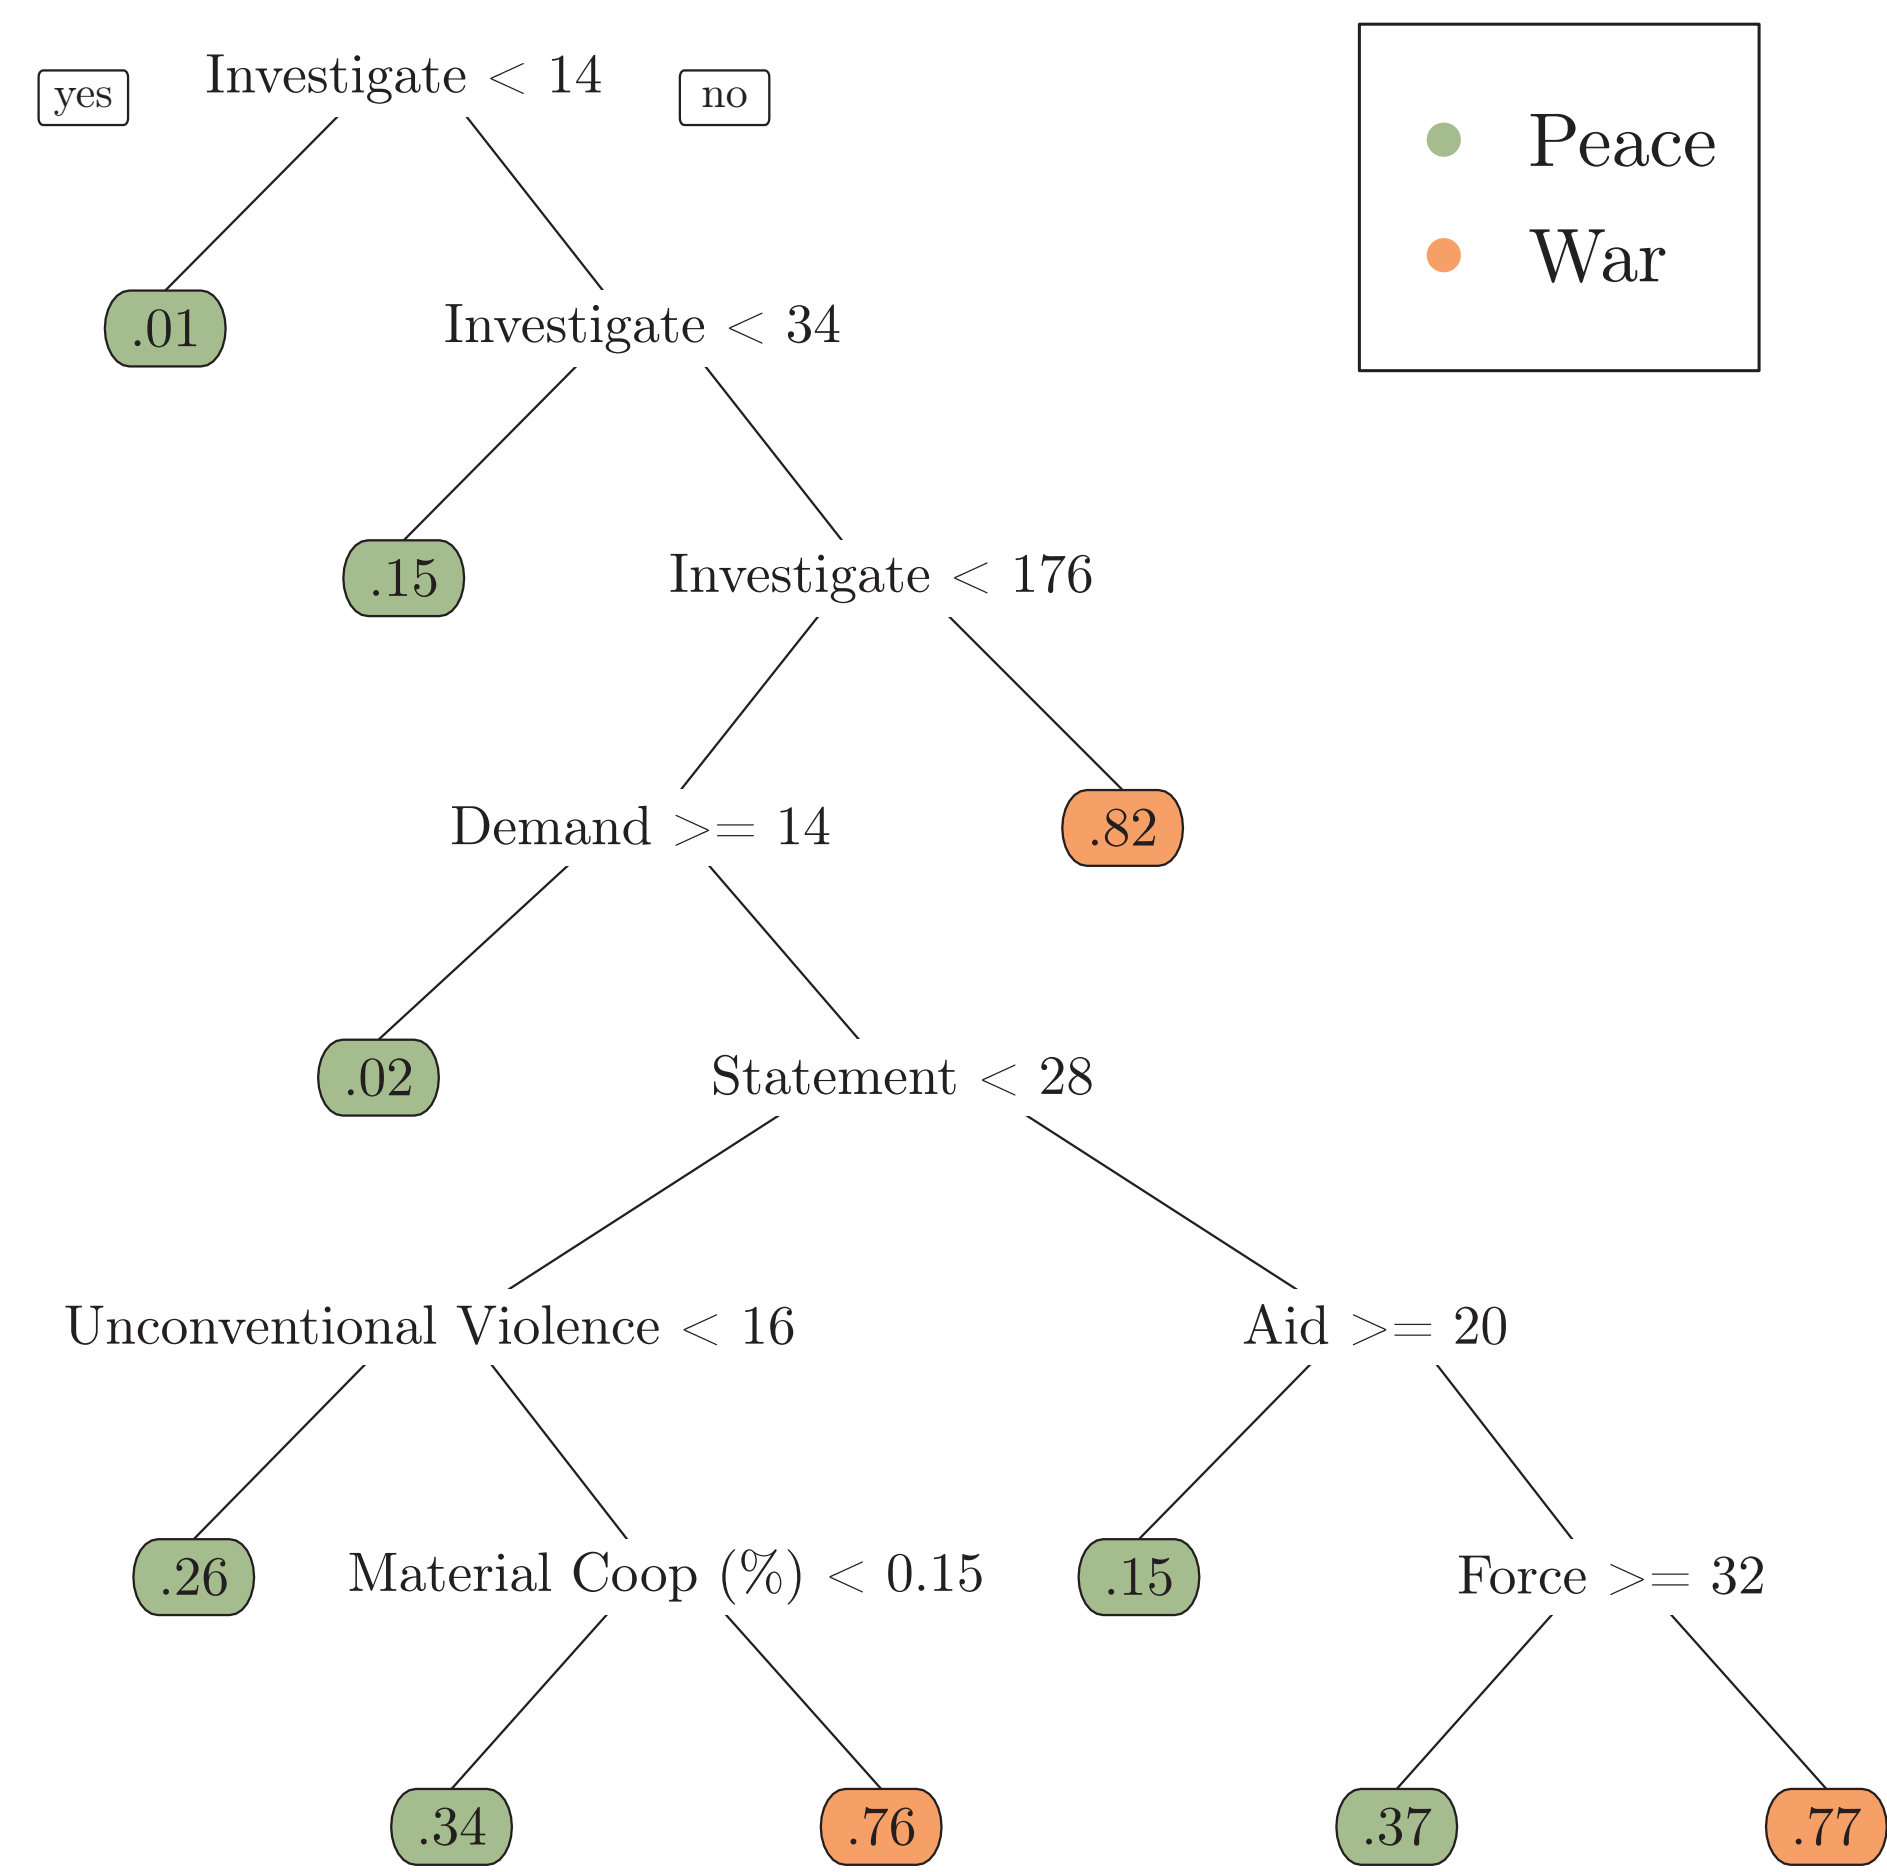

Data Source

Put a few indicative time series from GDELT here.

Classification Trees

Put in the tree and compare to logistic regression.

Results and Performance

Put in some maps.

Outlook

- Automated methods can speed up production of political indicators.
